DETAILED ACTION

Claim Objections

1. Claims 1-3 are objected to because of the following informalities:

The word "second" before "complementary memory cells" (claim 1, page 6, line 11) should be "third" and the word "third" before "and fourth complementary memory cells" (claim 1, page 6, line 12) should be "second" according to Fig. 6. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 4 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites the limitations "the first and third bitlines" and "the second and fourth bitlines" in line 10 and line 11, respectively. There is insufficient antecedent basis for each limitation in the claims.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 6 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Kohno et al..

Kohno discloses a method of reading a memory cell having all the steps as recited in claims 6 and 7 as follows:

- enabling a first word line (WLA, Fig. 1 and column 8, lines 9-13);
- turning on a first switch (access transistor of the memory cell, Fig. 1) connected to the first word line;
- transmitting data from a first unit memory cell (cell connected to WLA) to a first sense amplifier (50a, Fig. 2) using a first bitline (BL, Fig. 1 and column 8, lines 1-35); and
- transmitting data from a second unit memory cell (cell connected to WLB) to a second sense amplifier (50b, Fig. 2) using the first bitline (BL and column 8, lines 41-53).

Allowable Subject Matter

6. Claims 1-3 are allowed.

Claims 1-3 recite the circuit of Fig. 6 that is not found in prior art.
